

LINDBERG AVIATOR

The Lindberg Aviator seat is a slimline seating system that provides very high levels of comfort.

Available as a single or double seat unit, with or without armrests, the Lindberg Aviator has been configured for use in minibuses. A double seat and a single seat on one row leave a generous gangway to comply with the vehicle build requirements

The appearance of the Lindberg Aviator quickly lifts the level of perceived quality in the vehicle conversion – giving the executive feel without the price tag.

The Seats shown are trimmed to match the Mercedes Sprinter

# LINDBERG AVIATOR

The Lindberg Aviator headrest is finished in a wipe-clean vinyl material to allow easy cleaning of the contact area.

The Profiling of the headrest allows the occupant to relax without the risk of 'head roll' on the journey.

When combined with the Reclining Backrest feature, the journey in the Lindberg Aviator seat is transformed into a completely relaxing experience.

The Lindberg Aviator recline feature is controlled either by the release lever as shown below left, or where the armrest is fitted – the black press button in the seat moulding shown below right

The Lindberg Aviator is supplied with 285mm legs that complete the executive appearance of the system. These are freely width adjustable

## LINDBERG AUTO-FLOOR

The Lindberg Aviator Seating is currently supported for use in the Lindberg Autofloor System in the Mercedes Sprinter.

Lindberg is happy to work with customers on further applications where testing may be required.

## LINDBERG WHEELCHAIR RESTRAINTS

We also specialise in the manufacture and distribution of 'In-Vehicle Restraint Systems' allowing the safe transport of wheelchair users and other passengers alike
